Q: Does the Moon rotate? A: Yes.The time it takes for the Moon to rotate once around its axis is equal to the time it takes for the Moon to orbit once around Earth. This keeps the same side of the Moon facing towards Earth throughout the month.. If the Moon did not rotate on its axis at all, or if it rotated at any other rate, then we would see different sides of the Moon throughout the month.

think, of any book.

This book covers its narrator Tambu's childhood and teenage years in the Rhodesia of the 1960s.
