Air conditioning (often referred to as AC, A/C, or air con) is the process of removing heat and controlling the humidity of the air in a space. Air conditioning can be used in both domestic and commercial environments. This process is most commonly used to achieve a more comfortable interior environment, typically for humans and other animals; however, air conditioning is also used to cool and ...

Industrial buildings are classified according to certain basic characteristics. The most important of these is the number of stories: one, two, or more. Based on the handling equipment used, buildings are classified as either crane-equipped (with electric overhead cranes or with electric or manual suspension cranes) or as non-crane-equipped.

An industrial safety system is a countermeasure crucial in any hazardous plants such as oil and gas plants and nuclear plants. They are used to protect human, industrial plant, and the environment in case of the process going beyond the allowed control margins.. As the name suggests, these systems are not intended for controlling the process itself but rather protection.
