This is a list of butterflies of Great Britain, including extinct, naturalised species and those of dubious origin. The list comprises butterfly species listed in The Moths and Butterflies of Great Britain and Ireland by Emmet et al. and Britain's Butterflies by Tomlinson and Still. A study by NERC in 2004 found there has been a species decline of 71% of butterfly species between 1983 and 2003.

Ten or eleven species of reptiles occur in Great Britain: three snakes and three lizards, which were established at the time of the last ice age. Additionally, Britain has a number of introduced species which have become naturalized in their new environments.. Sea turtles have been recorded as coastal vagrants and the red-eared terrapin occurs as an introduced species.

Global declines in insects have sparked wide interest among scientists, politicians, and the general public. Loss of insect diversity and abundance is expected to provoke cascading effects on food webs and to jeopardize ecosystem services. Our understanding of the extent and underlying causes of this decline is based on the abundance of single species or taxonomic groups only, rather than ...
