4 w is three-fourths of the way to v starting from w . The vector $\frac{1}{4}v - \frac{3}{4}w$ is halfway to u . $\frac{1}{2}v - \frac{1}{2}w$. The vector $v - w$ is $2u$ (the far corner of the parallelogram). 16 All combinations with $c + d = 1$ are on the line that passes through v and w . The point $\frac{1}{2}v + \frac{1}{2}w$ is on that line but it is beyond w . 17

Linear algebra is the branch of mathematics concerning linear equations such as: $ax + by = c$, linear maps such as: $(x, y) \mapsto (ax + by, \dots)$, and their representations in vector spaces and through matrices..

Linear algebra is
