In historical linguistics and language change, grammaticalization (also known as grammatization or grammaticization) is a process of language change by which words representing objects and actions (i.e. nouns and verbs) become grammatical markers (affixes, prepositions, etc.). Thus it creates new function words by a process other than deriving them from existing bound, inflectional ...

But this input field is actually built to support both touch and click, along with drag and drop. The clickable area is an HTML label styled with CSS. That label element is attached to the input field, which is hidden off the page. It works just like a clickable field. Definitely a smart idea and it's fully semantic to boot. 5.
